RECOMMENDATION LETTER FOR EDOARDO MAIRA

To whom it may concern,

I am writing to recommend Edoardo Maira, who worked as student research assistant under my supervision for the academic year 2025/06 on a project that investigates regional house price developments in Denmark.

Edoardo's primary task was to construct two independent house price indices, a weighted repeat sales index and a hedonic specification, at both the municipal and national level, at monthly and annual frequency, and in real as well as nominal terms. This required handling large administrative micro-level datasets from Statistics Denmark using Stata.

On the technical side, Edoardo adapted and expanded upon existing codebases. He independently wrote, cleaned, and checked his analytical scripts in Stata, making decisions to ensure his routines could dynamically aggregate data across arbitrary geographical areas. He also developed a visualization layer in R that produces monthly and annual maps of all 98 Danish municipalities and compiles them into a video tracing the evolution of prices and growth rates over time.

Beyond this core project, Edoardo was a regular and active participant in our PhD seminars. Despite being a master student in a PhD seminar, he presented a paper and gave feedback to his colleagues' presentations, showing his commitment to our academic community.

Edoardo approaches his tasks proactively and carefully, ensuring that all his methodological choices are clearly documented. I recommend him and would be happy to provide any further details upon request.

Sincerely,

Kathrin Schlafmann
